Outputs

Outputs are used if the workflow is triggered by another workflow. In this case, the output is pushed back into the master workflow for further processing.

Defining an output

To define an output:

1. Open the workflow in Workflow Builder mode, see Create or Edit Workflow.
2. Select the **Start Activity** icon. The Configuration Panel displays properties.
3. In the Configuration Panel, select the **Outputs** tab.

Configuring an output

To configure an output:

1. Select the **+** icon to add a single output or repeat to add multiple outputs.
2. Type the name for the output.
3. Select the output type.
4. Select the value of the output.
