

Comments

Last Modified on 06/04/2020 11:11 am AEST

Comments allow you to keep notes within a calculation.

Overview

Use comments for notes such as:

- how your calculation works, for convenience later
- relevant business logic
- other information or caveats that you may need to remember the next time you revisit a calculation.

Comment notation can be used to indicate that all text between two markers is a comment, or to indicate that the remainder of the current line is a comment. The ReadNow calculation engine skips over comments when processing.

How to add comments

Block comments

Text between `/*` and `*/` pairs will be treated as block style comments.

```
/*  
This is a mult-line  
block comment.  
*/
```

Single-line comments

Using two hyphens (`--`) will treat the text following the hypens, till the end of the line, as in-line comments.

```
[First name] + ' ' + [Last name]      -- this is single line comment, at th  
e end of a line
```
