

isnull

Last Modified on 09/03/2020 3:19 pm AEDT

Returns its input, or falls back to a default value if the input is null.

Function

```
isnull(input, null-result)
```

Arguments

Argument	Data Type
----------	-----------

input	any
--------------	-----

null-result	any
--------------------	-----

result	any
---------------	-----

Comments

If *input* is null, then the *null-result* is returned, otherwise the *input* is returned.

Examples

The following calculation will follow a relationship named 'Person' and show the person's name, or the text 'No person' if there was no related person.

```
isnull([Person], 'No person')
```
