

floor

Last Modified on 25/05/2020 1:25 pm AEST

Rounds a number down to the next integer.

Function

```
result = floor(input)
```

Arguments

| Argument | Data Type |
|----------|-----------|
|----------|-----------|

| | |
|--------------|---------|
| input | numeric |
|--------------|---------|

| | |
|---------------|-----|
| result | int |
|---------------|-----|

Comments

Positive numbers are rounded down. Negative numbers are rounded away from zero.

Examples

```
result = floor(100.75)
/* result = 100 */
```
