

# month

Last Modified on 25/05/2020 1:04 pm AEST

Returns the month of a date or date-time value as a number.

## Function

```
result = month(input)
```

## Arguments

Argument	Data Type
----------	-----------

<b>input</b>	date (datetime will be implicitly cast to date)
--------------	---

<b>result</b>	integer
---------------	---------

## Comments

This function operates in the local time-zone if a datetime input is provided. See [Dates, Times and Time Zones](#).

## Examples

```
result = month(#1988-11-25#) /* result = 11 */
```

```
result = month(getdate())
```
