

reverse

Last Modified on 25/05/2020 1:12 pm AEST

Returns a list result in the reverse order.

Function

```
result = reverse(input)
```

Arguments

Argument	Data Type
input	list
result	list

Comments

Reverses the order of a list.

This function is usually used with ordering to return a meaningful output. An example of this is shown below.

Examples

```
result = reverse([Direct Reports] order by [Name])
```
