Microsoft Word Interoperability

Custom Fonts

If non-standard fonts are being used in the template Word document, then it is recommended that those fonts be embedded into the template file so that generated documents will be correctly viewable by all recipients.

Refer to the Embed fonts in Word or PowerPoints Microsoft support article.

Table of Contents

Document generation does not support automatically updating data-driven Word content such as the table of contents, table sums, and save date. To update this content:

1. Open the generated document in Word

2. Press Ctrl+A to select the entire document

3. Press F9 to update all Word content fields
