

Change Type

Last Modified on 27/05/2020 11:15 am AEST

Purpose

To change the Type of an existing Record, used to avoid having to create a new Record and delete the old one when migrating Records. Triggers are suppressed on a **Change Type** activity - no Triggers are fired after the conversion.

Configuration

Setting	Description
Record	<p>The Record to change Types. This can be set via:</p> <ul style="list-style-type: none">• Record• Parameter• Calculation
Object	<p>The Object to change the Type to.</p> <p>Note: When using the Change Type activity to change the type of a record from A to B where the type of A is T_A and the type of B is T_B:</p> <ul style="list-style-type: none">• When T_A is a base type of T_B (i.e. T_B inherits T_A) then all the Fields and Relationships of A will be automatically be present on the updated Record• When T_B is a base type of T_A (i.e. T_A inherits T_B) then only the Fields and Relationships that exist on B should be present on the updated Record• When T_A and T_B both derive from a common ancestor type T_C then only the Fields and

Relationships defined for T_C will be present on the updated Record

Setting
