

# Text

Last Modified on 24/01/2024 10:07 am AEDT

A Text is a basic text control that enables the user to display multiple lines of plain text.

## Text Properties

Section	Property	Function
	ID	The unique ID or name of the component.
	Format	Sets the content format: <ul style="list-style-type: none"><li>• Expression - content is derived from an expression formula.</li><li>• Rich text - content is plain text only.</li></ul>
	Expression formula	Visible when expression is selected as format type - input your formula here.
	Text	Visible when plain text is selected as format type - input your text content here.
Styling	Text size	Sets the text size: <ul style="list-style-type: none"><li>• Extra large</li><li>• Large</li><li>• Medium</li><li>• Small</li></ul>
Layout	Width	Sets the width of the text, minimum value is 1 and maximum is 12(Full).

Section Property

Function

Sizing

Can be set to:

- Fit content
- Fixed height

Height lines

Sets the number lines for the text, minimum of 1 line and maximum of 20 lines.

Behavior Visibility logic

Defines when the component is visible

- None - always visible
- Only visible when - only visible when the set condition is met
- Not visible when - not visible when the set condition is met
