## Configuring and using AI Suggest

Last Modified on 08/08/2024 10:48 am AEST

An AI prompt is a specific input or instruction given to the ReadiNow AI Engine to elicit a desired response or output. The ReadiNow AI query language leverages the power of the ReadiNow calculation engine. App builders can easily create engaging and interactive prompts that will assist users to accomplish their data entry.

Prompts can be added to the following Nova Page forms fields:

- Multiline text field
- Lookup field
- Relationship field displayed as both:
  - data table
  - ∘ inline

Here is an example of a ReadiNow AI query expression:

'Provide a list of controls for '+[Name] + 'risk for a company where each control name is less than 300 characters'

AI Query Expression	
Q, f(s)   x  ③	
1 'Provide a list of controls for ' + [Name] + ' risk for a company w	here each control name is less than 300 characters'
	Cancel Apply
ReadiNow Calculation engine offers ap	pp builders the ability to add
contextual information	to the prompt

## Configure and run an Al query:

- 1. Locate a Shared page where you want to incorporate the AI query.
- 2. Locate one of the supported **AI Suggest** field type properties:

Multiline text fields. Lookup fields. Relationship fields displayed as both data table and inline fields.

- 3. Find the Al Query expression in the properties panel.
- 4. Input the prompt as a calculation and click **Apply**.
- 5. Save the form.
- 6. Access the **Page form** through an app.
- 7. Click on the magic icon for **AI Suggest**.
- 8. In the AI Suggest modal dialog, review the response text or list returned. You may want make modifications to the suggestions and then click **Apply** to input the data into the field(s).
- 9. Optionally, you can amend and refine the prompt to improve your response.
