App Switcher

The **App Switcher** is a feature in Nova Navigation designed for users who frequently work across multiple Nova applications. It enables faster, more intuitive switching between apps—without the need to return to the landing page.

Availability

The App Switcher appears at the top of the page **only** if the current user has access to more than one Nova app.

- **Single-app users** will not see the App Switcher.

- **Disabled apps** are automatically excluded from the switcher.

Key Benefits

- **Efficient Navigation**: No need to return to the landing page—switch apps directly from any Page.

- **Fewer Clicks**: Ideal for power users, reducing the time and effort needed to access other applications.

- **Enhanced Discoverability**: Helps new or light users explore related Nova apps with ease.

- **Smooth Transition**: Supports the migration from monolithic apps to Nova without losing navigational convenience—serving as a modern alternative to Classic navigation tabs.

App Alias: Custom Labels for the App Switcher

To further personalise and streamline navigation, users can now define an **App Alias**, a display name shown in the App Switcher tabs.

Where to Find It:

- The **App Alias** field is available in the **App Properties** modal when creating or editing a Nova app.

- When creating a new app, the alias auto-fills based on the App Name, but can be modified if the name is too long or unclear.
